

# Installation Guide - Revoice Pro

Last Modified on 09/05/2018 12:20 pm BST

## Software Installation

If you have not already done so, download Revoice Pro from [here](#) and install it on your computer.

### Windows OS version:

Run the installer. It will provide all installation instructions.

#### System Requirements:

- Revoice Pro for Windows works with Vista (with Service Pack 2), Windows 7 and 8.
- It will **not** work with earlier versions of Windows.

### Mac OS version:

1. Double click the disk image (.dmg) file that you downloaded, to mount the disk image on the desktop.
2. Double click the mounted disk image to open it (unless it opens automatically), and drag the **Revoice Pro.app** (application) to your **Applications** folder or other preferred destination.
3. Double click the **Plug-ins.pkg** to install the Revoice Pro Link plug-ins for DAWs.
  - **Revoice Pro Link - Audio Units** (for Logic, etc.)
  - **Revoice Pro Link - Audio Suite** (for Pro Tools 10 and below) and **AAX** (for Pro Tools 11)
  - **Revoice Pro Link - VST3** (for Cubase, Nuendo, etc.)

**Note:** You can install all the above, or customize the installation to only install the plug-ins for your preferred Digital Audio Workstations.

## System Requirements:

- Intel Mac with OS X 10.6 or higher.

*Remember, Revoice Pro is a stand alone program, so you will need to start it each time you want to use it.*
